Summary

Software Engineer with 3 years of experience in backend development. Strong background in building backend systems using Django, Django REST Framework, FastAPI, SQL, and Firebase. Proven ability to optimize API performance, implement real-time features, and deliver secure, production-ready solutions.

Experience

Software Engineer

July 2024 – Present

Inara Technologies

Islamabad

- Engineered and maintained Django backend services, improving performance through query tuning, unit testing with pytest, and cross-functional collaboration with QA, design, and security teams.
- Represented the backend team in client-facing demos and requirement-gathering sessions, translating business needs into backend specifications.
- Contributed to scalable feature delivery across core platform workflows in an Agile environment.

Associate Software Engineer

Aug 2023 – July 2024

Astute Technologies

Bahawalpur

- Developed mobile and backend features, integrating REST APIs and Firebase with real-time data sync.
- Collaborated with backend, design, and QA teams to deliver stable, user-friendly solutions.

Projects

NADRA E-Sahulat | Django, FastAPI, PostgreSQL, Celery, Redis, Kafka

- Developing Django REST Framework (DRF) APIs for payment collection, disbursement, franchise wallet management, and utility bill processing on NADRA's microservices-based rebuild of the nationwide e-Sahulat platform.
- Implementing Celery-based async batch jobs and integrations with payment gateways and NADRA biometric verification services.

PTCL Smart Cloud Services | Django, FastAPI, VMware Cloud Director, Celery, Redis

- Built a cloud orchestration layer that abstracts infrastructure providers (VMware Cloud Director, AWS, Azure) behind a unified API, enabling PTCL to deliver managed cloud services without exposing underlying infra complexity.
- Implemented VM lifecycle operations and async resource scaling (CPU, memory, storage) using Celery and Redis to handle long-running provisioning workflows.

AI SOC Analyst Platform | FastAPI, LangGraph

- Engineered and deployed an AI SOC Analyst platform using FastAPI and LangGraph that orchestrates specialized agents for alert triage, log analysis, threat intelligence enrichment, MITRE ATT&CK mapping, and automated response recommendations.
- Designed an API-first security investigation system integrated with enterprise SIEM data, including FortiSIEM, to run autonomous end-to-end incident investigations and generate structured, prioritized remediation reports.

Transworld Cloud | Django, S3, Celery, Redis

- Architected a secure and scalable backend for a cloud storage platform using MinIO (S3-compatible object storage), with authentication, account management, and storage usage tracking.
- Designed Django REST Framework APIs for file management with a focus on security, reliability, and performance for media-heavy workloads.

Sourcing Commerce | Django, Celery, Redis

- Developed B2B e-commerce backend workflows enabling manufacturers to bid on product requirements submitted by retailers and administrators.
- Designed order aggregation and dispatch logic for manufacturer fulfillment.

Technical Skills

Technologies: Python, Django, Django REST Framework (DRF), FastAPI, PostgreSQL, SQL, Firebase, FCM, Redis, Celery, LangGraph, pytest, Flutter

Tools: Git, GitLab CI, Docker, REST APIs, WebSockets, MinIO (S3-compatible)

Methodologies: Agile Development

Education

The Islamia University of Bahawalpur

BS Software Engineering (CGPA: 3.80)

Bahawalpur, Punjab

Sept 2020 – May 2024
